- High school education
- 8.8 CGPA

Jangaon, India

Projects

[Age Calculator](#), | Developed using HTML, CSS, JS | 

In this project, we are going to create an age calculator. As you can see from the final version of the project, we have a container here with the title age calculator with an input of a date. If we click on the date input, we can choose the date of our birthday. For example, if we choose a date is in 2022 and if we click now on Calculate Age, you can see the age is calculated based on this date and saying your age is 2 years old with a sad emoji.

Certificates
